

MARKETING FUNNEL & CONVERSION PERFORMANCE ANALYSIS

Power BI Project Report
Future Interns – Data Science & Analytics Internship
Task 3

1. Executive Summary

This project focuses on analyzing marketing campaign performance and customer conversion behavior using Microsoft Power BI. An interactive one-page dashboard was developed to monitor customer conversion, compare converted and non-converted customers, and understand conversion patterns across customer demographics, employment, education, contact methods, housing, and loan status.

2. Project Objectives

- Analyze overall marketing campaign conversion performance.
- Calculate and monitor key conversion KPIs.
- Compare converted and non-converted customers.
- Identify customer segments with different conversion behavior.
- Analyze the effectiveness of customer contact methods.
- Build an interactive and business-friendly Power BI dashboard.
- Generate actionable insights to support data-driven marketing decisions.

3. Tools & Technologies

Tool / Technology	Purpose
Microsoft Power BI	Dashboard development and interactive reporting
Power Query	Data cleaning and transformation
DAX	KPI and analytical measure calculations
Data Visualization	Charts, KPI cards, slicers and dashboard design
Business Analytics	Marketing and conversion performance analysis

4. Dashboard KPIs

KPI	Dashboard Value	Description
Total Customers	45K	Total customers analyzed
Converted Customers	5K	Customers who converted

Not Converted	40K	Customers who did not convert
Conversion Rate	11.70%	Percentage of customers converted
Average Contacts	2.76	Average number of contacts per customer
Average Call Duration	258.16	Average call duration

5. Dashboard Components

Visualization	Purpose
Converted Customers by Job	Compares converted customers across job categories.
Education-wise Conversion	Analyzes conversion behavior across education levels.
Conversion by Housing	Compares customer outcomes based on housing loan status.
Marketing Conversion Summary	Compares converted and non-converted customers.
Converted Customers by Contact	Analyzes conversion by contact method.
Conversion by Marital Status	Examines customer distribution and conversion across marital groups.
Interactive Slicers	Filter the dashboard by month, job, marital status, contact, education, housing and lo

6. Interactive Filters

The dashboard includes slicers for Month, Job, Marital Status, Contact Type, Education, Housing Loan and Personal Loan. These filters allow users to analyze campaign performance for specific customer segments.

7. Data Analysis & Key Insights

- The overall conversion rate displayed on the dashboard is 11.70%.
- The majority of analyzed customers did not convert, indicating an opportunity to improve campaign targeting and engagement.
- Cellular contact is a major communication channel in the customer dataset.
- Conversion behavior varies across job and education categories.
- Housing and loan status can be useful variables for customer segmentation.
- Customers receive an average of 2.76 contacts.
- The average call duration is approximately 258 seconds, providing an indication of customer engagement.

8. Project Workflow

Raw Marketing Dataset → Data Import → Data Cleaning & Transformation → Data Modeling → DAX Measures & KPIs → Interactive Visualizations → Marketing Funnel Dashboard → Business Insights

9. Business Value

The dashboard can support marketing teams in identifying high-performing customer segments, improving campaign targeting, understanding contact-channel performance, optimizing follow-up strategies, and monitoring conversion performance through KPIs.

10. Project Outcome

Successfully developed a one-page interactive Power BI dashboard for Marketing Funnel & Conversion Performance Analysis. The final dashboard combines KPI cards, customer segmentation, conversion analysis, contact-channel analysis and interactive slicers to provide a concise business view of marketing performance.

11. Conclusion

This project demonstrates practical skills in Power BI, Power Query, DAX, data visualization and business analytics. The analysis converts marketing campaign data into an interactive dashboard that can help stakeholders understand conversion behavior and make more informed marketing decisions.
